

### **C**ERTIFICATE OF CONSTANCY OF PERFORMANCE

Issued by DBI Certification, notified body No. 2531.

In compliance with *Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011* (the Construction Products Regulation or CPR), this certificate applies to the construction product

V-430-S, V-530-S, V-430-VADW, V-530-VADW, V-430-S-VADW, V-530-S-VADW, V-430-SP, V-530-SP, V-430-SP-VADW, V-530-SP-VADW, V-430-SP-VADR, V-530-SP-VADR, V-430-VADR, V-430-VADR, V-430, V-530-VADR, V-530-EXIA, V-530-EXIC

The product fulfils the essential characteristic:

	See Annex 1
Intended use:	Applications related to automatic fire alarm systems
Placed on the market under the n	ame or trade mark of:
	Autronica Fire and Security AS
	Bromstadvegen 59
	NO-7047 Trondheim
	Norway
and produced in the manufacturir	ig plant:
	CPA10058
This attests that all provisions con	cerning the performance described in Annex ZA of the standard(s)
EN 54-3:2001/A1:2002/A2:2006	: Fire detection and fire alarm systems - Part 3: Fire alarm devices - Sounders
EN 54-5:2017/A1:2018	: Fire detection and fire alarm systems - Part 5: Heat detectors - point heat detectors
EN 54-7:2018	: Fire detection and fire alarm systems - part 7: Smoke detectors - Point smoke detectors that operate using scattered light, transmitted light or ionization
EN 54-23:2010	: Fire detection and fire alarm systems - Part 23: Fire alarm devices - Visual alarm

under system 1 for the performance set out in this certificate are applied and that the factory production control conducted by the manufacturer is assessed to ensure the

### CONSTANCY OF PERFORMANCE OF THE CONSTRUCTION PRODUCT.

devices

This certificate was first issued on 2022-07-07 and will remain valid as long as neither the harmonised standard, the construction product, the AVCP methods nor the manufacturing conditions in the plant are modified significantly, unless suspended or withdrawn by the notified product certification body.

The attached annexes form part of this certificate.

Date of issue: 2022-07-07.

Merete Poulsen Responsible for evaluation

Steen Nilsson Responsible for certification decision

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

Full model codes are defined by the formats V-430-xxxxx-yy/ww/zz and V-530-xxxxx-yy/ww/zz where: xxxxx = Model as listed in the table above

S, VADW, VADR, S-VADR, SP-VADW, SP-VADR, EXIA, EXIC

yy = Color of housing

Blank = White, BK = Black, CC = Customized Colour

ww = Enabled options

Blank = None, CD = Cover Detection & Self Varify, HS = Extra High Sensitivity\*, DS = Data Subscription, CFxxx = Custom Features (C = A to Z, F = A to Z, xxx = 000 to 999)

\* Note that when the HS = Extra High Sensitivity setting is used, the product is not compliant with EN 54-7:2018. Refer to the manufacturer's documentation.

#### Bases:

V-100 BASE V-110 BASE SIL2 V-120 BASE SIL2 Ex Note these bases are Certified under 2531-CPR-CSP11293.

### **Operating Voltage:**

10 to 27 V DC

#### EN 54-7:2018 Sensivity Classes configurable (panel/confirguration tool)

Sensivity Class	Description
High	Clean environments, for example laboratories, data rooms etc.
Medium	Normal environments, for example offices and hospitals etc.
Low	Industrial environments, for example factories and warehouses etc.

#### EN 54-3:2001/A1:2002/A2:2006 Approved Tone Settings

All applicable models indentified above are approved for use with the following tones at maximum volume setting only:

Tone Setting	Tone Description
Tone 1	Continuous 915Hz
Tone 2	Dutch Slow Whoop 500-1200Hz
Tone 3	Alternating 730 & 915Hz (2Hz cycle)
Tone 4	Continuous 3650Hz
Tone 5	Whoop 800-970Hz
Tone 6	DIN tone 1200-500Hz sweep (1Hz)

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

Model	Setting	Coverage	
V430-S-VADR	High	C-3-8	
	Medium	C-3-8	
	Low	C-3-5	
	Open	0-2.5-4	
V-430-VADR (Black Lid)		C-3-9	
V-430-VADW	High	C-3-12	
	Medium	C-3-9	
	Low	C-3-6	
	Open	0-2.5-4	

#### Heat Response Catergory:

For detector categories with the suffix S or R, additional requirements are needed see 4.4.1 or 4.4.2

Detector Category	Typical Application	Maximum	Minimum Static	Maximum Static
(Heat Class):	Temperature	Application	Response	Response Temperature
		Temperature °C	Temperature °C	°C

		A2, B, C: 20 K min <sup>-1</sup> was not less than 1 min and did not
		exceed 30 s compared with the time obtained in 4.3.6
Vibration, sinusoidal	4.6.4.4	No fault signal was given on reconnection attributable to
(endurance)		the endurance conditioning.
		Conditioning:
		Frequency range: 10 to 150 Hz
		Acceleration amplitude: 10 ms <sup>-2</sup> (≈1,0 g <sub>n</sub> )
		Number of axes : 3
		Sweep rate: 1 octave min <sup>-1</sup>
		Number of sweep cycles: 20 per axis

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

	Response time at 3 K min <sup>-1</sup> was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
	<u>A1</u> : 20 K min <sup>-1</sup> was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6 <u>A2, B, C</u> : 20 K min <sup>-1</sup> was not less than 1 min and did not exceed 30 s compared with the time obtained in 4.3.6
Electrical stability EMC 4.6.5 immunity (operational)	Compliance in EN 50130-4:2011 and No fault signal was given during the conditioning.
	Response time at 3 K min <sup>-1</sup> was not less than 7 min 13 s and did not exceed 2 min 40 s compared with the time obtained in 4.3.6.
	<u>A1</u> : 20 K min <sup>-1</sup> was not less than 30 s and did not exceed 30 s compared with the time obtained in 4.3.6 <u>A2, B, C</u> : 20 K min <sup>-1</sup> was not less than 1 min and did not exceed 30 s compared with the time obtained in 4.3.6

Essential characteristics	Clauses in EN 54-7:2018	Regulatory classes	Performance
Operational reliability:			
Individual alarm indication	4.2.1		The visual indicator(s) are
			visible from a distance of 6 m in
			an ambient light intensity up to 500 lx.
Connection of ancillary devices	4.2.2		Open or short circuit failures of
			connection to ancillary device
			did not prevent the correct operation of the detector
Monitoring of detachable detectors	4.2.3		A fault condition is signaled
			when the detector is removed
			from the mounting base.
Manufacturer's adjustments	4.2.4		It is not possible to adjust the
			detector settings without the
			use of a special tool to access
			into the detector or use of a
		None	code to enabling entry into the
			panel programming software.
On site adjustment of response behavior	4.2.5		The mode(s) of operation are
			adjustable from the Control
			and Indicating Equipment by
			use of a loop communication
			protocol. Access to enable
			mode changes is by software
			control of the protocol
			communication.
Protection against the ingress of foreign bodies	4.2.6		The chamber is designed so
			that a sphere of diameter
			(1,3±0,05) mm cannot pass into
			the sensor chamber.
Response to slowly developing fires	4.2.7		The provision of "drift
			compensation" (e.g. to
			compensate for sensor drift

The certificate shall be reproduced in extenso – extracts only with written permission from DBI Certification A/S.

			due to the build-up of dirt in
			the detector), does not lead to
			a significant reduction in the
			detectors sensitivity to slowly
			developing fires.
Software controlled detectors (when provided)	4.2.8		The software documentation
			and the software design
			complies with the
			requirements of EN 54-7:2018.
Nominal activation conditions/sensitivity:			
	124		Detie of some sectors
Repeatability	4.3.1		Ratio of response values
			m <sub>max</sub> :m <sub>min</sub> <u>&lt;</u> 1.6
			Lower response value,
			m <sub>max</sub> :m <sub>min</sub> ≥ 0.05 dB m <sup>-1</sup>
Directional dependence	4.3.2		Ratio of response values
Birectional dependence	1.5.2		
			m <sub>max</sub> :m <sub>min</sub> ≤ 1.6
			Lower response value,
			m <sub>max</sub> :m <sub>min</sub> ≥ 0.05 dB m <sup>-1</sup>
Reproducibility	4.3.3		Ratio of response values
			m <sub>max</sub> :m ≤ 1.33
			Ratio of the response values
			$\overline{m}$ : $m_{min} \le 1.5$
			Lower response value, m <sub>min</sub> >
			0.05 dB m <sup>-1</sup>
Response delay (response time):			
Air movement	4.4.1	-	Patia is > 0.0625 and < 1.60
Air movement	4.4.1		Ratio is > 0.0625 and < 1.60
			and the point smoke detector
			did not emit a fault nor alarm
			signal during the test with
			aerosol-free air
Dazzling	4.4.2		The specimen did not emit
Dazzinig	7.7.2		
			neither an alarm nor a fault
		Threshold	signal and Ratio of response
			thresholds m <sub>max</sub> :m <sub>min</sub> <u>&lt;</u> 1.6
Tolerance to supply voltage:			
Variation in supply parameters	4.5		Ratio of response values
variation in supply parameters	4.5		
			$m_{max}:m_{min} < 1.6$
			Lower response value, m <sub>min</sub> >
			0.05 dB m <sup>-1</sup>
Performance parameters under fire conditions:			
Fire sensitivity	4.6		Evaluated as meeting the
,			requirements of TF2 toTF5
Durability of nominal activation			
-			
conditions/Sensitivity:			
temperature resistance		_	
Cold (operational)	4.7.1.1		The specimen did not emit
			neither an alarm nor a fault
			signal and Ratio of response
			values m <sub>max</sub> :m <sub>min</sub> < 1.6
Dry hoat (anaratic zal)		-1	
Dry heat (operational)	1740		The specimen did not emit
	4.7.1.2		
	4.7.1.2		neither an alarm nor a fault
	4.7.1.2		neither an alarm nor a fault signal and Ratio of response
	4.7.1.2		signal and Ratio of response
Humidity resistance	4.7.1.2	_	
Humidity resistance		_	signal and Ratio of response values m <sub>max</sub> :m <sub>min</sub> ≤ 1.6
Humidity resistance Damp heat, steady-state (operational)	4.7.1.2	-	signal and Ratio of response
