# Gas as fuel or cargo We'll keep you safe

Sailing the seven seas with hazardous material in the hold or on the tank can have its challenges. Our mission is to make the journey completely safe – for both crew, cargo, and the environment.

# AutroSafe Maritime Gas

Ensuring a safe passage.

Vessels carrying big loads of flammable gasses are dependant on fast and reliable detection. That's why we made AutroSafe Maritime Gas detection system. Utilising a PowerLoop, the system is redundant in both power and communication. The dual communication combined with short circuit isolators in each detector ensures point safety and immunity to single fault.

The system is easily scalable to suit any type vessel, and can easily be connected to any top system by Modbus.

## AutroPoint Maritime Gas detector

- ✓ Point IR hydrocarbon
- ✓ Robust and explosion-proof
- ✓ High performance
- ✓ Constant heating
- ✓ Industry-leading weather baffle
- ✓ Withstanding extreme environments
- ✓ Immune to background gas exposure
